

**What's different about BulldogPRO  
PCG and SCG series Cold water Pressure Washers ?**

**Powered By:**

Overhead valve gasoline engine by **Subaru or Vanguard** (others available !).  
They are **much quieter** than designs by other manufacturers.  
Includes throttle for easy pressure control, and low oil shutdown for durability.

**The Pump:**

Annovi Reverberi brand; solid ceramic plunger pump with all the highest quality components including **forged bronze rods**, stainless steel valves, oversize bearings and solid forged brass head with 1/2" fpt inlet ports. Each pump is matched to the high efficiency, **volume matched, removable** unloader valve, connected with a compression swivel-connector for easy servicability. Pressure-Safety **relief** with **stainless ball & seat** for efficiency and safety. A **high volume bypass system** (5/8"i.d. x 60") solves the bypass overheat problems of most pumps. (Leaving the gun off while the system runs in bypass allows friction-heat build-up in the pump... normally with gun OPEN, heat is carried away by the flowing water.) The much slower heat up time allows the **brass thermal relief** valve to open exactly at the rated 140° F protecting the pump.

**More Features:**

**Downstream chemical injection** is acid resistant and comes with quick couplers.

**High pressure hose** is 50'ft of industrial rated, rubber-jacketed wire braid hose with quick-couple attachment between both ends of the hose.

**Trigger gun** is rear entry style with **4000 psi** rating or better, and quick couplers.

**Spray wand** is 4000 PSI rated steel, or 6000 PSI stainless. No plastic connections!

**Spray nozzles** are quick connect style stainless steel with plastic protectors.

**Frame** is .095" steel, sandblasted, primed & hi-temp powder coated, or aluminum.

**Recommended Options:**

**Low water shutdown system**...Kills engine with low water pressure/volume.

**Bypass temperature limit shutdown**...Kills engine with bypass @ 140° F.

This eliminates bypass overheat problems.

**"Turbo Nozzle"** spray intensifier...Exponentially increases force of water

Impacting the surface, which dramatically increases cleaning power.

There are so many **things to know** about this kind of equipment, you really should call or e-mail us so we can quantify your **exact needs**, answer ALL the questions which will **at least save you money**, and get you directly to **"long term low cost"** where YOU **KNOW** you **WANT** to **BE** !  
besides... **it's the fun part of our jobs.**

**BulldogPRO Industrial** Water Blasters are manufactured by...
